Absolutely. Below is a **foundational Product Requirements Document (PRD)** for Mawiz Academy. I've deliberately made the MVP narrower than the long-term vision so the product can actually be built, tested, and validated.

MAWIZ ACADEMY

Product Requirements Document (PRD)

Product: Mawiz Academy
Company: Mawiz Technologies Ltd
Product Type: AI-powered learning, workplace-readiness and talent development platform
Document Version: 1.0
Status: Product Definition / MVP Planning

---

1. Executive Summary

Mawiz Academy is an AI-powered learning and workforce-readiness platform designed to bridge the gap between **acquiring a skill and being able to perform effectively in the real world of work**.

Today, many graduates and aspiring professionals leave universities, bootcamps, online courses, or training programs with academic qualifications or technical skills but lack the practical experience, professional behaviour, communication abilities, teamwork, problem-solving abilities, business understanding, and workplace exposure required to succeed in professional environments.

Mawiz Academy addresses this gap by taking learners beyond traditional course completion.

The Academy will guide learners through:

> **Assess → Learn → Practice → Build → Simulate Work → Prove → Become Work-Ready**

Rather than asking only:

> "What course did this person complete?"

Mawiz Academy seeks to answer:

> **"What can this person actually do, and how prepared are they to perform in a real working environment?"**

The long-term vision is to create an ecosystem connecting learning, practical experience, workplace readiness, talent evidence, and eventually employment, freelance work, internships, and business opportunities.

---

2. Problem Statement

2.1 The Core Problem

There is a significant gap between **skill acquisition and workplace competence**.

A person may:

- graduate from university;
- complete a bootcamp;
- earn a certificate;
- learn programming;
- learn graphic design;
- learn data analysis;
- learn cybersecurity;
- learn digital marketing;
- learn AI tools;

and still struggle when placed in a real organization.

The problem is that **knowing how to perform a technical task is not the same as knowing how to work professionally.**

Many emerging professionals have limited exposure to:

- professional communication;
- teamwork;
- workplace etiquette;
- task management;
- deadlines;
- project ownership;
- client interaction;
- receiving feedback;
- giving updates;

- documentation;
- meetings;
- business requirements;
- problem-solving in ambiguous situations;
- professional writing;
- workplace tools;
- organizational structures;
- accountability;
- real project constraints.

Consequently, there is a transition gap:

School → Skill Training → ??? → Workplace

Mawiz Academy exists to fill the **???**.

---

3. Problem Hypothesis

We believe that:

> **Learners become significantly more prepared for professional opportunities when learning is combined with practical projects, workplace simulations, professional skills, feedback, and demonstrable evidence of capability.**

Therefore, Mawiz Academy will not define learner success primarily by course completion.

It will define success increasingly by:

Capability + Practice + Behaviour + Experience + Evidence

---

4. Product Vision

Vision Statement

> **To build a generation of professionals who are not only skilled, but ready to work.**

Mawiz Academy aims to become a bridge between:

Education → Skills → Experience → Work → Career Growth

---

5. Product Mission

> **Mawiz Academy equips people with the skills, experience, workplace capabilities, and evidence they need to confidently transition into and thrive in the world of work.**

---

6. Core Product Philosophy

Traditional learning:

> Learn → Take Test → Get Certificate

Mawiz Academy:

> **Assess → Learn → Practice → Build → Experience → Prove → Opportunity**

The Academy should progressively move the learner from **knowledge acquisition to demonstrated capability**.

---

7. Target Users

7.1 Primary User — Emerging Professional

Examples:

- university graduates;
- final-year students;
- unemployed graduates;
- career starters;
- self-taught professionals;
- people transitioning into technology;
- people who have acquired a skill but lack experience;

- people seeking their first professional opportunity.

Primary pain points

- "I have a skill but nobody wants to give me experience."
- "I have certificates but no real projects."
- "I don't know how the corporate world works."
- "I don't know how to behave in a professional environment."
- "I don't know how to present myself to employers."
- "I have never worked on a real team."
- "I don't know what employers expect from me."

---

8. Secondary Users

8.1 Students

Students who want to develop employable capabilities before graduation.

8.2 Career Switchers

People moving from one profession to another.

8.3 Self-Taught Professionals

People who have skills but lack structured experience or formal evidence.

8.4 Employers

Organizations looking for candidates with demonstrated capabilities.

8.5 Businesses / SMEs

Small businesses that can provide realistic projects and practical work opportunities.

---

9. Core Value Proposition

For Learners

> **Don't just learn a skill. Learn how to use it in the real world.**

For Employers

> **Discover talent based on demonstrated capability, not certificates alone.**

For Businesses

> **Access emerging talent while giving them practical work experience.**

---

10. Product Differentiation

Mawiz Academy should not compete simply by offering another library of online courses.

Its differentiation is the combination of:

1. Skill Learning

Learners acquire technical and professional knowledge.

2. Practical Application

Learners use their knowledge to solve problems.

3. Workplace Simulation

Learners experience realistic workplace situations.

4. Professional Development

Learners develop communication, collaboration, accountability, and other workplace competencies.

5. Evidence of Capability

Learners build verifiable evidence demonstrating what they can actually do.

The central principle is:

> **Certificates show that someone completed learning. Mawiz Academy should increasingly show what someone can actually perform.**

---

11. Product Framework

Mawiz Academy's learning journey will be built around seven stages.

Stage 1 — ASSESS

Understand the learner.

The system evaluates:

- existing skills;
- knowledge;
- career goals;
- experience;
- interests;
- strengths;
- weaknesses;
- workplace-readiness gaps.

Output

A personalized learner profile and development path.

---

12. Stage 2 — LEARN

The learner receives structured learning.

Learning may include:

Technical Skills

Examples:

- Software Development
- Cybersecurity
- Data Analysis
- AI
- Digital Marketing
- Video Editing
- Design
- Automation

Professional Skills

Examples:

- Communication
- Teamwork
- Leadership
- Problem Solving
- Time Management
- Critical Thinking
- Professional Writing
- Presentation
- Client Management

---

13. Stage 3 — PRACTICE

The learner applies concepts through:

- quizzes;
- exercises;
- challenges;
- coding tasks;
- case studies;
- assignments;
- scenario-based activities.

The goal is to move from:

"I understand it."

to:

"I can do it."

---

14. Stage 4 — BUILD

Learners complete projects.

Projects should progressively become more realistic.

Example

Instead of:

> "Build a simple API."

Mawiz Academy could eventually provide:

> "A company needs a customer-management API. Here is the business requirement. Build the system according to the requirements."

The learner produces a real artifact.

Examples:

- application;
- website;
- dashboard;
- marketing campaign;
- security report;
- business analysis;
- video;
- automation workflow;
- data report.

---

15. Stage 5 — WORK SIMULATION

This is one of the most important components of Mawiz Academy.

Learners experience realistic workplace situations.

Examples

A learner may receive:

Task

> "Your team lead has assigned you a task that must be completed by Friday."

The learner must:

1. understand the requirement;
2. ask appropriate questions;
3. plan the work;
4. execute it;
5. provide progress updates;
6. submit the work;
7. receive feedback;
8. make revisions;
9. document the result.

This creates a controlled environment where learners can experience professional expectations before entering the workplace.

---

16. Workplace Simulation Categories

Mawiz Academy should eventually simulate:

Communication

- professional emails;
- Slack/Teams-style communication;
- reporting;
- asking questions;
- escalation.

Meetings

- stand-ups;
- team meetings;
- client meetings;
- presentations;
- reviews.

Teamwork

- working with developers;
- designers;
- marketers;
- managers;
- clients.

Project Management

- task assignment;
- deadlines;
- milestones;
- prioritization;
- progress reports.

Feedback

- receiving criticism;
- revising work;
- peer review;
- manager review.

Client Interaction

- understanding requirements;
- communicating delays;
- presenting solutions;
- handling revisions.

---

17. Stage 6 — PROVE

The platform converts learner activity into evidence.

Instead of only issuing:

> "Certificate: Backend Development"

Mawiz Academy should eventually be able to produce:

Capability Profile

Technical

- API Development — demonstrated
- Database Management — demonstrated
- Git — demonstrated
- Deployment — demonstrated

Workplace

- Communication — demonstrated
- Team Collaboration — demonstrated
- Documentation — demonstrated
- Deadline Management — demonstrated
- Feedback Implementation — demonstrated

Experience

- Projects completed
- Simulations completed
- Team projects
- Client projects
- Mentor reviews

---

18. Talent Profile

Each learner should eventually have a professional digital profile.

Possible sections:

- Name
- Professional headline
- Career target
- Skills
- Projects
- Work simulations
- Experience
- Portfolio
- Certifications
- Professional competencies
- Mentor feedback
- Project feedback
- Work samples
- Achievements

The profile becomes a living representation of the learner's development.

---

19. Stage 7 — OPPORTUNITY

This is a long-term component.

Once sufficient evidence exists, the platform can connect qualified learners with:

- internships;
- freelance projects;
- apprenticeships;
- jobs;
- contract opportunities;
- business projects;
- mentorship;
- entrepreneurial opportunities.

The platform should initially treat opportunity matching as a **later-stage feature**, rather than attempting to build a complete job marketplace in the MVP.

---

20. AI Layer

AI should not exist merely as a chatbot.

It should support the learner throughout the journey.

AI Learning Assistant

The AI can:

- explain concepts;
- answer questions;
- generate practice exercises;
- provide hints;
- analyze learner progress;
- identify knowledge gaps;
- personalize learning;
- recommend next activities.

AI Career/Workplace Coach

The AI can help learners:

- prepare for interviews;
- practice professional communication;
- write professional emails;
- simulate workplace conversations;
- prepare for meetings;
- receive feedback;
- improve CVs;
- prepare portfolios.

AI Assessment

The system can analyze learner performance and identify areas requiring improvement.

Example:

> "Your technical performance is strong, but your task documentation and professional communication require additional practice."

AI recommendations should support—not replace—human assessment where human judgment is important.

---

21. MVP Definition

The MVP should NOT attempt to build every component described above.

The MVP should validate one fundamental hypothesis:

> **Can Mawiz Academy help a learner move from having a skill to demonstrating workplace readiness?**

MVP Journey

Step 1

Learner creates an account.

Step 2

Learner completes an assessment.

Step 3

Platform generates a development profile.

Step 4

Learner enters a selected skill pathway.

Step 5

Learner learns through structured content.

Step 6

Learner completes practical assignments.

Step 7

Learner completes workplace-readiness exercises.

Step 8

Learner completes a realistic project.

Step 9

Learner receives feedback.

Step 10

Platform generates a capability/portfolio profile.

---

22. MVP Modules

Module 1 — Authentication

- Registration
- Login
- Password reset
- Profile management

Module 2 — Learner Profile

- Personal information
- Career goal
- Skills
- Experience
- Education
- Learning interests

Module 3 — Skills Assessment

Assessment engine measuring:

- technical knowledge;
- practical ability;
- workplace readiness.

Module 4 — Learning Dashboard

Dashboard showing:

- current pathway;
- lessons;
- assignments;
- progress;
- projects;
- upcoming activities.

Module 5 — Course/Learning System

Core LMS functionality:

- modules;
- lessons;
- videos;
- text;
- resources;
- quizzes;
- assignments.

Module 6 — Practical Projects

Learners receive:

- project brief;
- requirements;
- expected deliverables;
- deadline;
- submission system.

Module 7 — Workplace Readiness

Initial workplace curriculum:

1. Professional Communication
2. Email & Written Communication
3. Teamwork
4. Time Management
5. Workplace Etiquette
6. Receiving Feedback
7. Problem Solving
8. Working With Managers
9. Client Communication
10. Professional Accountability

Module 8 — Work Simulation

Initial simulations can be scenario-based.

Example:

> **Your manager sends you a task with unclear requirements. What do you do?**

The learner responds.

The system evaluates the response against predefined competencies.

Module 9 — AI Assistant

The learner can ask questions and receive learning support.

Module 10 — Portfolio / Capability Profile

Display:

- completed courses;
- projects;
- skills;
- practical work;
- simulations;
- achievements;
- feedback.

---

---

24. Example Learner Journey

Learner

David wants to become a Backend Developer.

Assessment

Mawiz Academy discovers:

- JavaScript: Intermediate
- Node.js: Beginner
- Database: Beginner
- Git: Intermediate
- Communication: Needs development
- Project experience: Low

Personalized Path

Technical

Node.js → Express → MongoDB → APIs → Authentication → Deployment

Workplace

Communication → Git collaboration → Task management → Documentation → Teamwork

Practice

David completes technical exercises.

Project

He receives:

> Build an API for a small business customer-management system.

Work Simulation

A simulated team lead assigns a change request.

David must:

- understand the request;
- respond professionally;
- estimate the work;
- implement the change;
- submit it;
- document it.

Feedback

The platform identifies:

Technical: Strong
Communication: Moderate
Documentation: Needs improvement
Deadline management: Strong

David continues practicing.

Result

David leaves the pathway with:

- technical projects;
- workplace simulations;
- demonstrated competencies;
- portfolio evidence;
- learning records.

This is substantially more useful than simply receiving a certificate.

---

25. Assessment Framework

Mawiz Academy should eventually assess learners across multiple dimensions.

A. Technical Competence

Can the learner perform the technical task?

B. Practical Competence

Can the learner apply knowledge to solve a problem?

C. Professional Competence

Can the learner behave and communicate effectively in a workplace?

D. Problem-Solving

Can the learner handle unfamiliar situations?

E. Collaboration

Can the learner work effectively with others?

F. Reliability

Can the learner manage commitments, deadlines, and responsibilities?

G. Business Understanding

Can the learner understand why the work matters to the organization/customer?

---

26. Employer-Facing Vision

Long term, Mawiz Academy should allow employers to discover talent through **evidence rather than only resumes**.

Instead of:

> "Candidate has a certificate."

An employer could see:

> Candidate completed 6 practical projects, participated in 10 workplace simulations, collaborated on 3 team projects, received mentor feedback, and demonstrated specific competencies.

This creates a potential bridge between:

Learning Data → Capability Evidence → Talent Discovery

---

27. Business Model

Potential revenue streams include:

1. Learner Subscription

Monthly/yearly access.

2. Course Purchase

One-time payment for specific programs.

3. Cohort Programs

Instructor-led premium programs.

4. Professional Bootcamps

Intensive career programs.

5. Corporate Training

Organizations pay to train employees.

6. Employer/Talent Services

Long-term opportunity matching and talent discovery.

7. Practical Project Partnerships

Businesses can sponsor or submit real-world project challenges.

---

28. Initial Business Model Recommendation

For MVP validation, keep monetization simple.

Primary:

Paid learning/career pathways

Secondary:

Instructor-led cohort programs

Do not depend on employer marketplace revenue until there is enough learner evidence and talent supply.

---

29. Key Metrics

Acquisition

- Website visitors
- Signups
- Assessment starts
- Assessment completion

Engagement

- Weekly active learners
- Lessons completed
- Practice tasks completed

- AI interactions
- Workplace simulations completed

Learning

- Assessment improvement
- Project completion
- Skill progression

Workplace Readiness

- Simulation performance
- Professional competency improvement
- Mentor/assessor feedback

Outcome

The most important long-term metrics:

- internship placements;
- employment;
- freelance projects;
- successful client projects;
- learner income improvement;
- employer satisfaction.

---

30. North Star Metric

A potential North Star Metric for Mawiz Academy:

> **Number of learners who become demonstrably work-ready**

This should eventually be defined through measurable criteria rather than simply self-reporting.

---

31. Non-Goals for MVP

To prevent scope explosion, the first version should NOT attempt to build:

- a full LinkedIn competitor;
- a full job marketplace;
- a massive course marketplace;
- an advanced HR platform;
- a complete freelancer marketplace;
- complex employer recruitment infrastructure;
- every possible skill category;
- fully automated AI assessment for everything;
- an enormous social network.

The MVP should prove the **learning-to-work transition** first.

---

32. Technology Direction

The platform should be designed as a web application first.

Potential architecture:

Frontend
↓
API / Backend
↓
Authentication
↓
Learning Engine
↓
Assessment Engine
↓
Project Engine
↓
Work Simulation Engine
↓
AI Layer
↓
Learner Evidence / Portfolio
↓
Database

The architecture should remain modular so future components such as employer matching can be added without rebuilding the entire platform.

---

33. Admin Platform

Administrators should be able to:

- create courses;
- create modules;
- create lessons;
- create assessments;
- create assignments;
- create workplace simulations;
- review submissions;
- provide feedback;
- manage learners;
- manage instructors;
- track learner progress;
- manage projects;
- view analytics.

---

34. Instructor/Mentor Platform

Instructors should eventually be able to:

- manage learners;
- review assignments;
- review projects;
- provide feedback;
- conduct assessments;
- monitor progress;
- mentor learners;
- verify practical work.

Human mentors are important because workplace competence cannot always be reliably reduced to automated scoring.

---

35. Security & Privacy

The platform should include:

- secure authentication;
- password hashing;
- authorization;
- role-based access;
- secure API design;
- encrypted sensitive information;
- appropriate data retention;
- learner consent;
- privacy controls.

Learner performance information should not automatically become publicly visible.

---

36. Product Roles

Initial roles:

Learner

Consumes learning, completes projects and simulations.

Instructor

Creates and delivers learning.

Mentor/Reviewer

Evaluates practical work.

Administrator

Manages the platform.

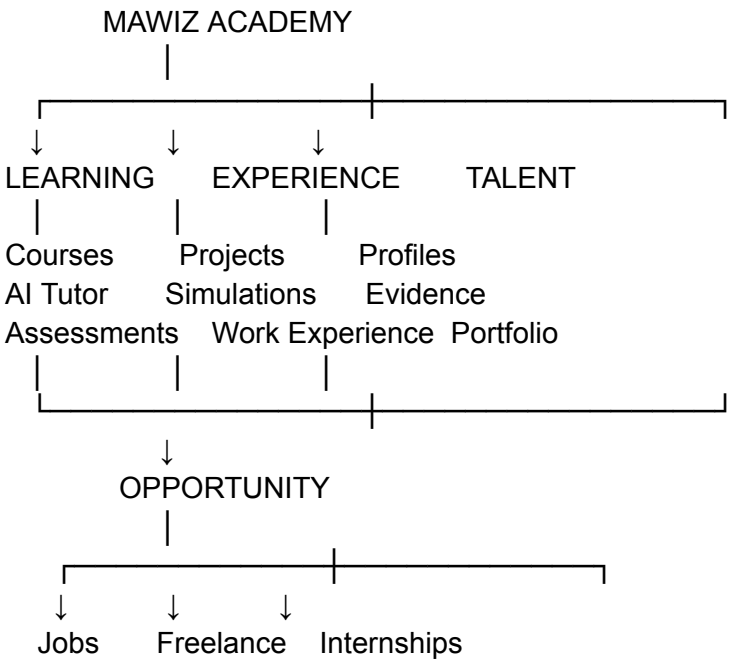

Employer

Future role for discovering verified talent.

---

37. Future Product Ecosystem

The long-term Mawiz Academy ecosystem can evolve into:

---

38. Long-Term Vision

Mawiz Academy can eventually evolve from an education platform into a **talent development and workforce infrastructure platform**.

The learner journey becomes:

> **I don't know → I learn → I practice → I build → I experience work → I prove myself → I become work-ready → I access opportunities.**

That is the larger vision.

---

39. Competitive Positioning

Mawiz Academy should avoid positioning itself simply as:

> "An AI learning platform."

That positioning is increasingly crowded.

A stronger positioning direction is:

> **An AI-powered platform that bridges the gap between skill acquisition and workplace readiness.**

Or:

> **Mawiz Academy helps people turn skills into workplace capability.**

Or, as a simple learner-facing message:

> **Learn the skill. Experience the work. Become work-ready.**

---

40. Product Success Definition

Mawiz Academy succeeds if a learner can enter the platform saying:

> **"I have little or no experience."**

and, after completing a meaningful pathway, leave with:

> **"I know what I'm doing, I've practiced it, I've worked through realistic situations, I've received feedback, I can demonstrate what I can do, and I'm prepared to enter a professional environment."**

That is the fundamental product outcome.

---

41. MVP Product Principle

The most important principle for the development team:

> **Do not build a platform that merely teaches people more. Build a platform that makes people more capable.**

Every major feature should therefore answer one question:

Does this help the learner become better prepared to perform real work?

If the answer is no, the feature should probably not be a priority for the MVP.

---

42. Proposed MVP Development Phases

Phase 1 — Foundation

- Authentication
- User profiles
- Admin dashboard
- Course structure
- Learning dashboard

Phase 2 — Assessment

- Skills assessment
- Career assessment
- Basic personalization
- Progress tracking

Phase 3 — Practical Learning

- Assignments
- Projects
- Submissions
- Feedback
- Portfolio

Phase 4 — Workplace Readiness

- Professional skills curriculum
- Workplace scenarios
- Simulations
- Communication exercises
- Feedback system

Phase 5 — AI

- AI learning assistant
- Personalized recommendations
- AI practice
- Career/workplace coaching

Phase 6 — Evidence

- Capability profile
- Project evidence
- Competency records
- Shareable learner profile

Phase 7 — Opportunity

Future:

- Employer accounts
- Talent discovery
- Internship matching
- Freelance opportunities
- Job opportunities

---

43. Final Product Definition

Mawiz Academy is not just an LMS.

It is intended to become a:

> **Learning + Practical Experience + Workplace Readiness + Talent Evidence platform.**

Its central problem is the gap between:

> **"I have learned a skill."**

and

> **"I can perform this skill effectively in a real professional environment."**

Its central promise is:

Mawiz Academy helps people bridge that gap.

And its long-term ambition is:

To become the bridge between learning and meaningful work.

The key thing I would **not lose during development** is the workplace-simulation/evidence layer. That is what turns Mawiz Academy from "another AI LMS" into a product with a much clearer problem to solve.
